## SUMMARY

Hard-working professional with two years of full stack development experience and proven knowledge of application development, web design, and customer service. Aiming to leverage my skills and passion for technology to successfully fill the software developer role at your company

---

## EXPERIENCE

**ATOS SYNTEL**, Collierville, Tennessee

2018-Current

### *Full Stack Software Developer*

- Designed and implemented a scalable solution using SQL and Java that allowed business to compare and merge multiple domain data tables with up to 500,000 rows, drastically reducing the time and errors that were caused by manually merging domain data.
  - Successfully lead a small scrum team in implementing various new features that enhanced the existing application and provided more flexibility to the end user. These features are used by thousands of users daily
  - Received a SPOT recognition award for timely and defect free move to production of one and a half year worth of development features, making it one of the biggest releases of recent time.
  - Became a Subject Matter Expert of an existing module within first year at the company, allowing team to have a point of contact for any issues or design related questions for changes to that module.
  - Used various frontend and backend technologies like Java, SQL, Angular, JSF, HTML, and CSS to build web pages with complex functionalities without sacrificing performance.
  - Coordinated with business team to analyze requirements and then split them into smaller stories while providing estimates and a timeline for delivery
  - Mentored new team members by sharing domain and application knowledge, which consolidated my own knowledge and made newly joined members more productive
  - Coordinated with team members across different time zones and various other stake holders to ensure timely delivery of user stories
- 

## EDUCATION

**ILLINOIS INSTITUTE OF TECHNOLOGY, CHICAGO, ILLINOIS**

2014-2018

*Bachelor of Science, 2018*

*Computer Engineering*

---

## SKILLS

- Strong programming skills in object-oriented language like Java
  - Good understanding of data structures and algorithms
  - Experience with full stack development including technologies like: JSF, Angular, Java, RESTful web services, Spring, XML, JSON, and relational database (SQL)
  - Experience in coding, testing, and debugging large codebase
  - Familiarity with Spring framework and RESTful web services
  - Experience with version control systems (GitLab) and build automation tools (Maven/Jenkins)
- 

## PERSONAL PROJECTS

### **TESLA HERO (PORTFOLIO WEBSITE)**

Tesla themed portfolio website built using angular and deployed using github pages

<https://hamza783.github.io/tesla-hero/>

### **FACE RECOGNITION**

Web site developed using React that takes advantage of Clarafai's face detection API to detect faces in pictures

### **UNIQUE EMAIL ADDRESS WEBSERVICE**

Restful web service that takes a list of email addresses and returns a list of unique email addresses based on Gmail's unique email address rules. It is developed using Java and spring boot.
